

## **Postdoc position "High spatio-temporal resolution research on language production"**

The [Max Planck Institute for Psycholinguistics](#) invites applications for a 5-year Post-Doctoral Research Scientist position in the field of language production research. The research will be conducted in the group of Max Planck Research Fellow Peter Indefrey at the MPI and the [Donders Centre for Cognitive Neuroimaging](#), both in Nijmegen, the Netherlands.

This group will apply high spatio-temporal resolution methods to investigate the activation time course of brain regions involved in word production.

The selected candidate(s) must have the ability to conduct independent research, publish academic manuscripts and should have expertise in MEG, preferentially also TMS/brain stimulation techniques and MRI imaging.

The position will be open from beginning of 2018.

Applications must be submitted electronically to [indefrey@hhu.de](mailto:indefrey@hhu.de)
